

HOW TO RANK ON GOOGLE

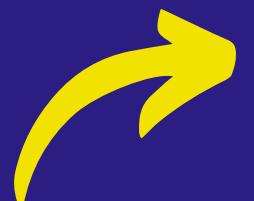

A Checklist for Getting Things Done

1

KEYWORD RESEARCH

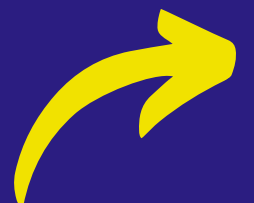

You will never get ranking if you are targeting the wrong keyword. So, an Professional keyword research is necessary to tell google where you want to go

2

META DESCRIPTION

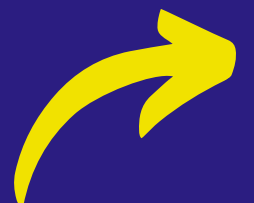

Meta description is an short description which apperas on google under your site link when your site is searched . It helps google to understand what you are serving.

3

IMAGE SEO

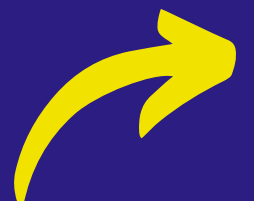

Google understand only Tags which is written on the back end of your site. Similarly, when you post an image google dont view image it read it's tags written behind the image. So, always try to put accurate tags so google can read your image.

4

SITEMAP

If your site is not properly arranged then google bots will not be able to crawl it. Suppose, bots come to your site but they do not crawl your money pages and go through other pages so this will affect your ranking. Sitemap helps google bots to crawl your money pages first.. Sitemap is a very important factor to rank on google.
